Amazon.com Review

The world-famous volunteer organization Habitat for Humanity now offers its best nuts-and-bolts expertise in an easy-to-follow home construction handbook. Whether the reader contemplates building his or her own house or plans on volunteering to build for others, Habitat for Humanity: How to Build a House delivers on the promise of its title. Step-by-step instructions by author and veteran crew supervisor Larry Haun are provided in plain, simple English, with lots of encouragement and no condescension to beginners. Practically every page contains an extra "helping hand" tip on materials, tools, building codes, or safety precautions. In hundreds of color photographs and black-and-white line drawings, the book follows the construction of a single house--from choosing its location to the final step of installing its exterior door locks. Reassuring personal stories from Habitat volunteers are scattered throughout, along with confidence-inspiring promises from the author such as "building a simple house is not a mystery."

Millard Fuller, founder of Habitat, has written a foreword to this book, and a percentage of the book's proceeds will be donated to the organization to help build more homes. Habitat for Humanity, founded in 1976, has built more than 100,000 affordable houses throughout the world. --Judy Fireman

From Library Journal

Habitat for Humanity (HFH) has a great reputation for helping poor people build affordable housing; over the last 25 years, it has built over 100,000 homes worldwide (it is the 15th-largest home builder in the country). The beauty of their system is that the home isn't a giveaway; homeowners must work on their home and the homes of others and must pay for their house themselves. HFH simply offers them the necessary assistance. Haun, a carpenter and Habitat volunteer, shows how to build a solid house from the ground up. As might be expected, the methods used by HFH result in a decent, affordable, no-frills home--there are no

mini-mansions here. The highly readable text covers a HFH project in Charlotte, NC, from start to finish, including site acquisition and preparation, tools needed, foundations, framing, roofing, windows, interior finishing, household systems, and landscaping. The detailed instructions are enhanced by clear illustrations and photos. This is an excellent guide to home construction with the added bonus that it offers recognition to a great organization. Recommended for all public libraries.

Prep to *help* build a house

By MW LM

This book is good, if you accept it for what it is. The author, an executive with Habitat for Humanity, tells us a lot of important stuff about how to build a small ranch house. Some of what he says is wrong. Many things should be done differently in different climates, and he doesn't always tell you this. Habitat for Humanity is a wonderful organization, and if you're going to be a volunteer, helping them build houses -- or if you're going to be a helper for anyone else who's building houses -- this book will give you a really good background, to help you understand what you'll be doing, and why you'll be doing it. But this book falls far short of what the title says it is, in that it doesn't tell you nearly enough for you to build a house without guidance and supervision from an experienced crew leader.

Best Book for Home Building Basics

By James N. Stephens

I'd have given 4 1/2 stars if I could. I've built part of my tiny home using mostly this book. It was the best book (by far) I found for a novice builder. I think it would also be great for anyone wanting to know the basics of building- a habitat volunteer or budding carpenter/ apprentice. It's easy to read and it seems quite thorough for basic building but not so comprehensive that it's overwhelming- just right in my opinion. Its conciseness and readability means that there are compromises made in detail that limit its application to basic practices. I've found (the hard way) that building even a tiny house is complex and there are often different ways to do things and it can be hard to know what's best. Often this book will explain the differences but sometimes (again for brevity) not so much. For one example, I found a window flashing method that I like better than Haun's in *The Visual Handbook of Building and Remodeling*, by Charlie Wing (another good companion to Haun's book as is: *Working Alone*, by John Carroll). For the most part though, this book is an invaluable resource. Ideally, use this book along with one or more others (such as the others I referenced) and, if you're lucky, enlist the aid of a trustworthy builder for consultation when questions or

problems arise. I needed all of these for building my house but this book has been the most valuable and trusted part of the "team". Haun also has some youtube how tos and another book or two that are helpful.

Written by a master carpenter in layman's terms....

By Hugh Latham

Written in layman's terms by a master carpenter for the do-it-yourselfer. This book doesn't cover electrical and plumbing but covers everything else pertaining to a basic wood framed house and is well worth the price. It covers tools, foundations, floors, walls, roof, windows, doors, siding, exterior trim, basic porches, decks, landings, sealing, insulating, ventilating, drywall, painting, basic interior trim, cabinets, counter-tops, closets, locks, smoke detectors and landscaping. The author Larry Haun passed away a few years ago but there are still some outstanding instructional videos that he did on youtube.
