## About the Author

Richard Enbody is an Associate Professor in the Department of Computer Science and Engineering at Michigan State University. Since joining the faculty in 1987, he has served as Acting Chair of the Department, Associate Chair, and as Director of the Computer Engineering Undergraduate Program.

Enbody received his B.A. in Mathematics from Carleton College in 1976, and spent six years teaching high school mathematics in Vermont and New Hampshire. He earned his Ph.D. in Computer Science from the University of Minnesota.

Richard's research interests are in computer security, computer architecture, web-based distance education and parallel processing, especially the application of parallel processing to computational science problems. He has two patents pending on hardware buffer-overflow protection which will prevent most computer worms and viruses.

In 1998 Richard pioneered a CS1 course (first course in Computer Science) over the World Wide Web using RealVideo synchronized with PowerPoint. Students from as far away as Russia and Korea enrolled in the course.

When not teaching, Richard plays hockey, squash, canoes, backpacks, as well as a host of family activities.

Bill Punch is an Associate Professor in the Department of Computer Science at Michigan State University as well as the director of Michigan State's High Performance Computing Center.

Punch is co-director of the Genetic Algorithms Research and Applications Group or GARAGe. His main interests are genetic algorithms and genetic programming, including theoretical issues (parallel GA/GP) and application issues (design, layout, scheduling, etc.). He also has conducted active research in data mining,

focusing on the use of ontologies such as WordNet and Wikipedia for text search.

A problem-solving approach to programming with Python.

The Practice of Computing Using Python introduces CS1 students (majors and non-majors) to computational thinking using Python. With data-manipulation as a theme, readers quickly see the value in what they're learning and leave the course with a set of immediately useful computational skills that can be applied to problems they encounter in future pursuits. The book takes an "object-use-first" approach—writing classes is covered only after students have mastered using objects.

This edition is available with MyProgrammingLab, an innovative online homework and assessment tool. Through the power of practice and immediate personalized feedback, MyProgrammingLab helps students fully grasp the logic, semantics, and syntax of programming.

Exactly what I needed

By Aleks

This book is actually very nice. I'm not a first-time programmer (but I'm definitely not experienced with Python language) and this book is very easy to understand and read. I bought this for my Intro Programming class at college, but my class is all online so you definitely don't need to be in college to use this book. It can be used by anyone willing to try to learn some basic code on their own! My copy did come with a MyProgrammingLab access (NOTE: I bought this NEW directly from Amazon, beware of other sellers!), which was a relief because one small part of me was doubtful. Other than that, the book is nicely sized, although it is paperback so it just required a bit more care than a hardback book. Overall, this book is exactly what I needed for my class!

Great book

By Mok

I use this book for Programming 1 at University and I have found it a very helpful resource with easy to understand information on how to use Python. As a side I have very little previous programming experience, so the book was clearly written for people with little to no background.
